Genetec Inc.	CANADA	11	Security Center Synergis™IX	20 Aug 2024

No installation is Class 5 compliant unless accompanied by a site-specific Installer Compliance Statement (ICS) and Client Compliance Statement (CCS)

The capability recommendation is based on an overview of AS/NZS 2201.1-2007 and its referenced standards. Full compliance is neither guaranteed nor implied. Whilst the product may be capable of meeting Class 5 standard, meeting this Class relies extensively on both the installer and the client. As part of the capability certification, the supplier has produced both a Compliance Statement and associated documents.

These documents are dedicated to Class 5 compliance and form part of the Certification process.

The supplier has agreed that:

The required documentation will be maintained up-to-date for the period of the Certification, with ASIAL's inspector being advised in writing of any such changes, and they will maintain compliance throughout the certification. Any changes that may have an impact upon this will notified to ASIAL within 14 days. ASIAL may withdraw and cancel a certificate should it become aware of any non-compliance during the certification period.
